

Ubrufih Orevaoghene Dumbari

Graduate Data Scientist & Analyst

London, UK • orevaubrufih@gmail.com • [LinkedIn](#) • Portfolio available on request

PROFESSIONAL SUMMARY

IBM & Microsoft Azure Certified Graduate Data scientist completing an MSc in Data Science (January 2027) with strong Python and SQL skills and a solid foundation in maths and statistics built on an engineering background. I have developed and deployed machine learning models for financial risk predictions, ETL pipelines, and NLP applications across defence research and AI Training settings including automation pipelines that improved workflow efficiency by 50%, a RAG system for secure enterprise data, and sentiment models that improved classification accuracy by 15%. I work closely with non-technical teams to translate complex analysis into clear, practical insight. I am keen to apply analytical and ML engineering skills to real product problems in a fast-moving fintech environment.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

Statistics & ML: statistical modelling, regression, hypothesis testing, time series forecasting, ensemble methods, model evaluation, scikit-learn, TensorFlow, PyTorch, Pandas, NumPy

Analytics & Data Eng.: ETL pipelines, data infrastructure, exploratory data analysis, A/B and ad-hoc analysis, dashboards

Generative AI & LLMs: large language models, foundation models, Retrieval-Augmented Generation (RAG), prompt engineering, NLP

Cloud: Microsoft Azure (Azure ML, Data Factory), IBM Cloud, Docker, Kubernetes

Databases: PostgreSQL, MS SQL Server, MongoDB

BI & Visualisation: Power BI, Tableau, Matplotlib, Seaborn

Web & Tools: React.js, Next.js, Django ORM, Git

Strengths: analytical thinking, stakeholder communication, problem solving, proactive collaboration, mentoring

CERTIFICATIONS

- Microsoft Certified: Azure Data Scientist Associate (DP-100)
- Microsoft Certified: Azure AI Fundamentals (AI-900)
- Microsoft Certified: Azure Data Fundamentals (DP-900)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- IBM Data Science Professional Certificate
- IBM Full Stack Software Developer Professional Certificate

PROFESSIONAL EXPERIENCE

AI Adoption Specialist — AnselHill Academy Limited

May 2025 – Jan 2026

- Tasked with reducing manual workload across research teams, built generative AI automation pipelines in Python using large language models, improving workflow efficiency by 50%.
- Collaboratively Built a Tutor, parent, student management web application which generates report on a dashboard increasing quality assurance tracking. I utilized Nextjs, Postgres database, Next Auth and Generative AI research to deliver the project in 50% less time than expected.
- Designed reusable AI research templates to speed up market research, cutting project timelines from weeks to under 24 hours and reducing research costs by 80%.
- Reviewed team performance and designed an integrated AI tool ecosystem (Google NotebookLM, ChatGPT, Claude), removing redundant steps from weekly workflows.

Freelance Data Scientist

Jan 2023 – May 2025

- Developed and deployed NLP sentiment-analysis models on news data, improving classification accuracy by 15% and giving stakeholders clearer signals for decision-making.
- Built a Retrieval-Augmented Generation (RAG) system on large language models to enable secure handling of sensitive enterprise data.
- Deployed cloud-based ML solutions on Microsoft Azure (Azure ML, SQL databases, Docker), cutting data-processing time by 15%.
- Built a Natural Language Understanding application with IBM Watson NLU, Django ORM, Kubernetes, and IBM Cloudant to classify and surface insights from unstructured text.
- Developed a SpaceX Falcon 9 landing-prediction model using SVM, logistic regression, and decision trees, reaching 90% accuracy.
- Optimised delivery routes through geospatial modelling with NetworkX and Google OR-Tools, cutting delivery time by 25%.
- Built a full-stack online course web application using Python, Node.js, Django, and IBM Cloud PostgreSQL.

Data Analyst Internship — Betaverse Analytics

Oct 2022 – Jan 2023

- Analysed housing-market data in Python and built Power BI dashboards to guide investment strategy with predictive forecasts.
- Improved data-cleaning pipelines for airport traffic-delay models, raising prediction accuracy.
- Led SQL training for junior analysts, focusing on query optimisation and efficient data workflows.

Data Analytics Engineer — Defence Research and Development Bureau

Nov 2021 – Oct 2022

- Performed risk analysis and built contingency models, increasing operational efficiency by 20%.
- Applied data-science methods to research data, contributing to a published paper on civil-engineering applications in defence.

EDUCATION

MSc Data Science — University of Greenwich

Jan 2026 – Jan 2027

Relevant Courses: Big Data, Data Visualisation, Machine Learning, Programming Fundamentals for Data Science, Ethics in Data Science, Statistical Methods for Time Series Analysis, Graph and Modern Databases

BTech Civil Engineering — Second Class Upper Division (2:1)

Oct 2015 – Apr 2021

Relevant courses: Engineering Mathematics and Statistics, C++ Programming

KEY PROJECTS

- **Agentic Auditor – Explainable Fraud Detection:** Developed an **explainable fraud detection prototype** built using **LangChain agents, LangGraph orchestration, and SurrealDB graph queries**. The system detects fraud patterns deterministically using graph queries and then generates **grounded explanations using an LLM**, ensuring that explanations never invent evidence. This project demonstrates a **modern AI system architecture** combining: Graph databases, Agent orchestration, Deterministic detection, LLM reasoning, Interactive investigation UI
- **Infrastructure Credit Risk Model:** Built a binary credit risk classifier on 6,636 World Bank PPI infrastructure projects using Python (pandas, scikit-learn, XGBoost), identifying Brownfield/Divestiture deals as 80% more likely to default and ICT/Transport projects as 71% higher risk; model achieved 58% recall on a 1.9% base-rate distressed class where a naive classifier would catch zero
- **Route Optimization for Supply Chain Management:** Designed and implemented a route optimization model for delivery vehicles using **Python**, reducing delivery time by 25% through advanced geospatial data modelling with **Networkx** and **Google OR tools**.

- **SpaceX Falcon 9 Landing Prediction:** Built a machine learning model using **SVM, logistics regression**, and **decision trees** to predict Falcon 9 landings, achieving 90% model accuracy and providing actionable insights for future launches.
- **Housing Price Predictive Analysis:** Conducted data analysis and modelling of housing prices using Python(Numpy, Pandas,Sklearn) and data visualization tools(Matplotlib), contributing to enhanced market forecasting strategies.
- **Natural Language Processing (NLP) Cloud Application:** Developed a cloud-based NLU app on IBM Cloud using Python and React.js, which analysed text sentiment for clients in real-time, improving sentiment analysis accuracy by 15%.

LEADERSHIP

Creative Director, The Transformed State Podcast (Dec 2020 – Present)

- Created 586+ minutes of transformational teaching for listeners across 18 countries.
- Coordinate a community with over 100 members

Team Co-lead Production department, Calvary Place (Jan 2026 – Present)

- Led Timley production setup for weekly events (~500 attendees) and conferences (1,000+ attendees), managing full setup, routing and real-time monitoring
- Managed team post-production of events for digital distribution, gaining hands-on experience in deadline-driven workflows.

VOLUTEERING

Team Co-lead Media department, Calvary Place (Jan 2026 – Present)

Assistant Unit Head | Technical Department (Sound Unit), Foundation Faith (Apr 2023 – Jan 2026)

Google Digital On boarders (Nov 2021- Oct 2022)

Course Representative | Civil Engineering Department, RSU, Rivers (Nov 2017 – Jun 2018)
